OBJECTIVE

Computer Science undergraduate with strong foundation in Python and advanced machine learning methodologies including Linear Regression, Logistic Regression, Support Vector Machines, and Lasso Regression. Interested in developing scalable artificial intelligence solutions focused on data processing and predictive analytics.

TECHNICAL SKILLS

Programming: Python, Java (OOP), C, R

Machine Learning: Regression Models, Support Vector Machines, Supervised and Unsupervised Learning

Libraries: TensorFlow, PyTorch, Hugging Face, NLTK, Scikit-learn, Pandas, NumPy, Matplotlib, Plotly

Web Technologies: HTML, CSS, JavaScript, Django, PHP

Databases: MySQL, DBMS

Tools: Git, VS Code, Jupyter Notebook, Netlify, Vercel

Data Handling: Cleaning, Visualization, Feature Engineering, Predictive Modeling

PROJECTS

Sentiment Analysis Tool

- Developed text classification application using NLTK and Hugging Face Transformers.
- Implemented preprocessing pipeline and interactive visualization modules.
- Deployed solution on Vercel.

Predictive Analytics Web Application

- Implemented multiple regression techniques and SVM models from scratch.
- Visualized feature impact and predictions using Plotly.
- Hosted platform on Netlify.

Interactive Data Dashboard

- Built dynamic dashboard using Django and Pandas for structured dataset exploration.
- Enabled filtering and real-time analytical insights.

Stock Market Analysis Platform

- Integrated real-time financial data.
- Applied LSTM architecture for trend forecasting.
